MURCHISON, TX 75778

THE FUND FOR ANIMALS, INC.

Type: ROUTINE INSPECTION

Date: Oct-03-2011

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

(b) Each dealer or exhibitor shall establish and maintain programs of adequate veterinary care that include: (2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries, and the availability of emergency, weekend, and holiday care.

Five (1ml) vials and one 100ml (partial used for treatment) antibiotics were noted in the pharmaceutical section of the food processing room. The expired drugs were pointed out to management and it was explained that the use of expired medical materials such as drugs, fluids, or suture materials on regulated animals is not considered to be acceptable veterinary practice and does not constitute adequate veterinary care as required by the regulations promulgated under the Animal Welfare Act. All expired medical materials found in a licensed or registered facility are to be brought to the attention of the responsible official. The facility must either dispose of all such materials or segregate them in an appropriately labeled, physically separate location from non-expired medical materials. The Animal & Plant Health Inspection Service (APHIS) has no jurisdiction over facilities using expired medical materials for non-regulated animals or non-regulated activities. This is a repeated citation which was cited in the last routine inspection conducted on May 10, 2011.

3.75 (c) (1) (ii) REPEAT DIRECT NCI

HOUSING FACILITIES, GENERAL.

(c) Surfaces--(1) General requirements. The surfaces of housing facilities--including perches, shelves, swings, boxes, houses, dens, and other furniture-type fixtures or objects within the facility--must be constructed in a manner and made of materials that allow them to be readily cleaned and sanitized, or removed or replaced when worn or soiled. Furniture-type fixtures or objects must be sturdily constructed and must be strong enough to provide for the safe activity and welfare of nonhuman primates. Floors may be made of dirt, absorbent bedding, sand, gravel, grass, or other similar material that can be readily cleaned, or can be removed or replaced whenever cleaning does not eliminate odors, diseases, pests, insects, or vermin. Any surfaces that come in contact with nonhuman primates must: (ii) Be free of jagged edges or sharp points that might injure the animals.

A broken perching post pointing upward with a sharp jagged edge was noted in the primary enclosure
